

Blended Learning In The Classroom-By Kelly Faughey

What is blended learning?

Blended learning is traditional learning infused with the use of digital technology. Blended learning is completed with a teacher and student. However, some learning can be done as a hybrid course with courses that have been prerecorded.

What are the 6 types of blended learning styles?

1. Station Rotation Blended Learning
2. Lab Rotation Blended Learning
3. Remote Blended Learning
4. Flex Blended Learning
5. The 'Flipped Classroom' Blended Learning
6. Individual Rotation Blended Learning

What are some activities we can use in a blended learning classroom?

The Station Rotation students go in groups from 1 station to another and using digital technology to retrieve solutions for worldly problems.

The Lab Rotation students learn online in a computer lab.

Remote Learning this is when the teacher and student is online at different times. The student must complete the work that is given by the teacher. The teacher then will give feedback.

The Flex Blended Learning is when students are learning in a traditional classroom but also have activities to complete online for their course work.

In a Flipped Classroom, students watch online e-learning courses, collaborate in online discussions, and complete research at home while engaging in concepts in the classroom with the guidance of a teacher.

In an Individual Rotation Blended Learning environment the student rotates on an individually customized schedule.

Why is blended learning important for today's children?

Students need to know how to use technology and research different topics. They need to be able to form opinions on different topics in all subjects. We need to create problem solvers and out of the box thinkers. We want our students to be leaders.
